DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/29/2008 has been entered.

Applicants' arguments, filed 7/29/2008, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Double Patenting Rejections:

All double patenting rejections from the previous action (final rejection of 2/5/2008) are maintained because Applicant has not yet filed terminal disclaimers.

Claim Rejections - 35 USC § 102:

Claims 54 and 58-64 are rejected under 35 U.S.C. 102(b) as being anticipated by Kohn et al., U.S. Patent 6,365,616. Applicant's arguments are unpersuasive and the rejection is maintained for the reasons of record and further below.

Art Unit: 1614

Applicant argues that “the Examiner incorrectly relies on inherent anticipation in the rejection” regarding the use of the Merck Manual teachings. (See Remarks p. 17). Applicant states that “40% of SLE patients...have lesions on one or more valves” and that “there are numerous SLE patients who do not necessarily have this cardiovascular disorder” (see Remarks p. 17).

The Merck Manual, and now Applicant’s own admission, clearly show that a portion of SLE patients do in fact have this cardiovascular disorder. Thus, SLE has inherent cardiovascular aspects. The disclosure of the prior art (i.e., the Kohn et al. reference) is to treat *all* patients suffering from SLE, thus treating the co-morbid disorders as well. Therefore, the reference does in fact teach the inherent treatment of cardiovascular disorder by treatment of SLE. In other words, those patients that have SLE which is also characterized by noninfective endocarditis (the cardiovascular disorder) and are treated with the claimed compound, are receiving treatment for both disorders. Therefore the rejection is maintained.

Conclusion

All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 1614

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
